CAREER HIGHLIGHTS

- Designed and integrated an automated load-testing framework into the CI/CD pipeline for the Amazon Business registration application, which exposed a critical load-balancer defect capping traffic at 50% and ultimately enabled the team to resolve the bottleneck and restore the system to 100% of its targeted capacity.
- Led the architectural transformation of an SMS and Email notification endpoint within distributed Amazon Business registration web application, successfully deploying the update to production with zero downtime to reduce message delivery latency by 60% without disrupting active users.
- Architected and implemented the registration capabilities for Spanish public entities within Amazon Business, enabling thousands of public sector organizations to register and establishing a scalable foundation for future European Union expansion.
- Implemented a performance optimization project for Blackboard's course content page (Used by millions of users). By identifying inefficient code and resolving these defects using AngularJS, I improved overall page performance by 30% within just three weeks.

WORK EXPERIENCE

Amazon

Sep 2022 - Oct 2025

Development Software Engineer

Stack: Java, Javascript, React.js, Typescript, AWS, SQL, CSS, HTML, SCSS

- Led the technical planning and implementation of age-restriction system for Amazon Business registration, ensuring strict compliance with EU policies and preventing unauthorized account creation by minors.
- Mitigated a critical IDOR vulnerability within the registration service's connection to Amazon's address system, proactively securing backend systems and preventing potential data exposure for millions of customers.
- Modernized registration backend logging infrastructure by migrating from legacy hourly exports to AWS CloudWatch, leveraging real-time monitoring and telemetry to significantly accelerate the resolution of production issues.
- Resolved a critical defect affecting several downstream relational databases by patching an AWS Lambda function and executing a data backfill, successfully restoring cross-team operations affected by corrupted information.
- Engineered an AWS Step Function to safely test 15 redesigned registration emails in different regions, launching the policy-compliant templates across 10 marketplaces and 20+ languages with zero production impact.

Scotiabank

Apr 2021 - Aug 2022

Full Stack Software Engineer Specialist

Stack: Java, Javascript, Knockout.js, PostgreSQL, CSS, HTML, SCSS

- Integrated mortgage platform with a KYC micro-frontend, guaranteeing up-to-date client data to significantly reduce financial and operational risks for the bank.
- Led the development of a verified-address restriction feature within the ScotiaHome application, accelerating mortgage processing by eliminating manual entry errors and reducing operational costs.
- Instructed an internal programming bootcamp covering HTML, CSS, and modern JS (React.js), successfully empowering a non-technical employee to transition into a technical engineering role.

Blackboard

Nov 2019 - Apr 2021

Software Engineer

Stack: React.js, Angular.js, Java, Python, SCSS

- Authored several E2E tests covering professor feedback and rubric evaluation flows, preventing system regressions and increasing product resilience during automated deployments of new features.
- Implemented the front-end ReactJS rubrics component for the Learn/Ultra platform, delivering the user interface that allowed millions of students and teachers to directly input grades and review evaluation criteria.

EDUCATION

Master of Science, Computer Science (Major: Artificial Intelligence)

Expected 2027

Georgia Institute of Technology

Atlanta, GA

Relevant Coursework: Video Game Design, Game AI, AI, Operating Systems.

Stack: Java, C++, C, Python, C#

Bachelor of Computer Systems Engineering

Aug 2019

Colombian School of Engineering Julio Garavito

Bogotá, Colombia

Stack: Java, Javascript, SQL, C++, Python
